

Personal Diary

This personal diary application offers a secure and intuitive platform for users to document their daily experiences. Leveraging Firebase for cloud storage and incorporating biometric authentication ensures both data security and ease of access. With features like customizable themes and seamless data synchronization, the app enhances the user experience while maintaining privacy. By providing a robust solution for digital journaling, this application meets the evolving needs of users seeking a modern and secure way to capture and preserve their memories.

Uses: Java for coding

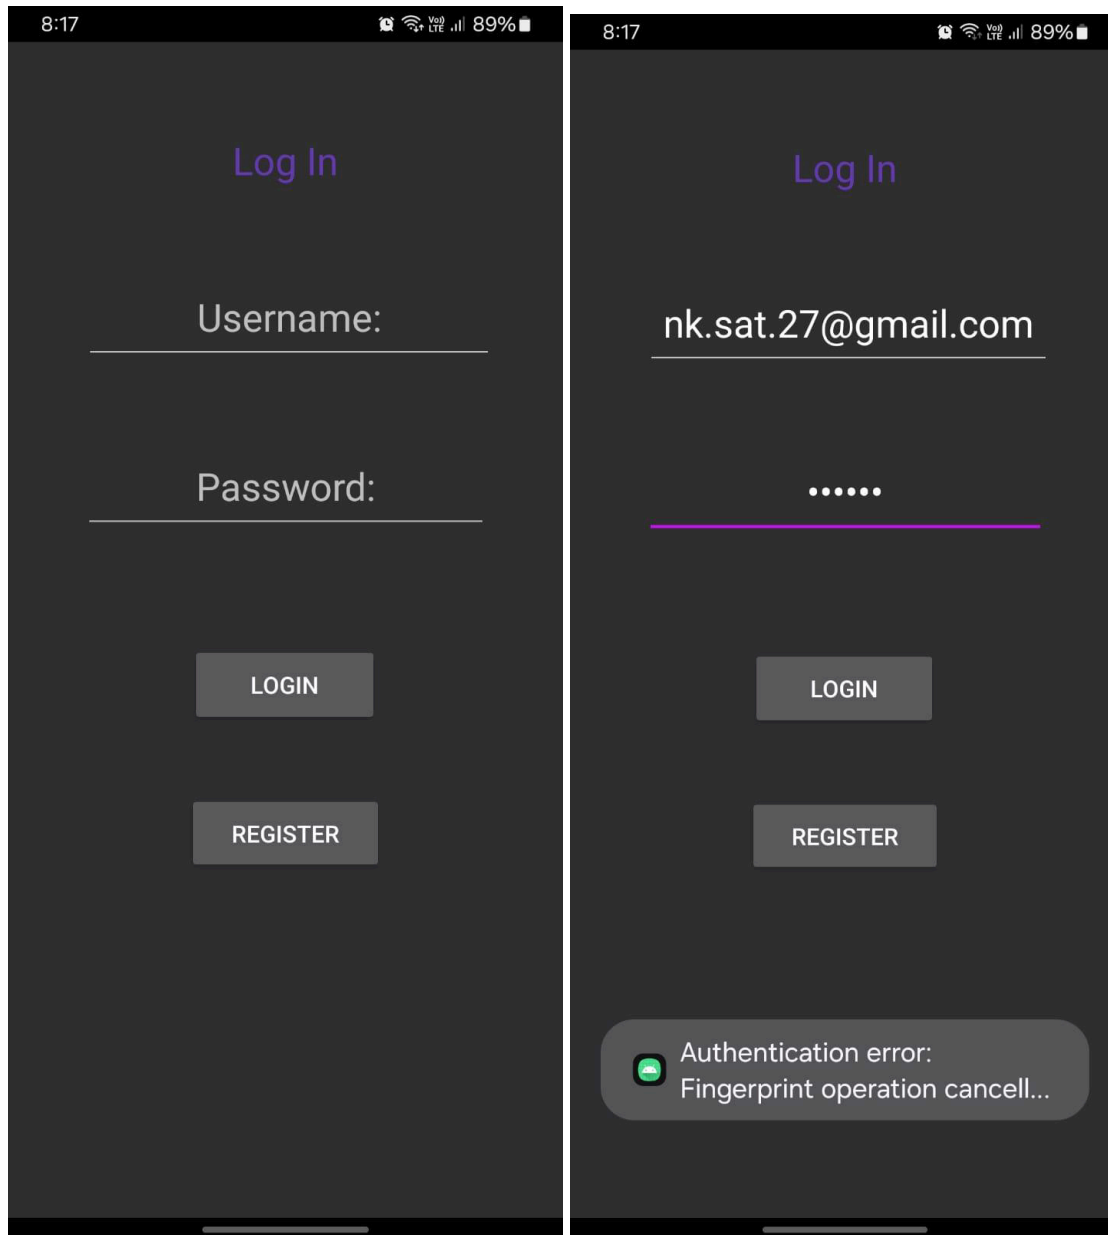

Built environment: Android Studio

Database: Firebase

Authentication: Username, password and Fingerprint.
